

WHAT IS CLAIMED IS:

1. A method for increasing graft survival time in a transplantation subject having a graft comprising:  
administering to said subject  
compound (a) possessing an inhibitory activity on the production of nitric oxide and  
compound (b) that is a cyclosporin or a rapamycin,  
in an amount and for a time and under conditions effective to increase graft survival  
time.
2. The method of Claim 1 comprising administering a cyclosporin.
3. The method of Claim 1 comprising administering a rapamycin.
